

REVIEW/DISCUSSION SESSION 1

Some logistics:

- feel free to leave your camera off,
- discussion can occur through the chat or verbally (unmute yourself and speak up),
- session will be recorded, but not posted publicly.

Tentative outline:

- for each of lectures 1a and 1b:
 - * discussion/questions about topics?
 - * questions/review of do-files?
- discussion of Linear Regression Exercise (VER 14) # 1, with Stata demonstration,
 - * all program files posted at VHM 802 Exercises page,
 - * also solution file (.pdf) posted this morning,
- further discussion of extra exercises from “Exercises for Session 2: Linear and multiple linear regression”,
 - # 1: simple linear and polynomial regression, outliers, transformation,
 - # 2: residuals and diagnostics for simple linear regression.
