

PRACTICAL/LAB SESSION 4

- work on second logistic regression exercise (VER 16.2),
  - \* initial discussion of causal diagram?,
  - \* review of the exercise towards end of session?,
- (maybe) work on extra “Additional exercises for Session 4: Logistic regression”,
  - # 2: grouped binary data for dose-response relation similar to example in lecture,
  - # 3: logistic two-factor design,
  - # 4: logistic model-building,
- (maybe) discussion of earlier exercises (VER 14, 15, 16.1), individually with instructor,
- any questions on linear and logistic regression models (conceptual and/or practical), possibly related to the regression assignment of VHM 812 (though I cannot comment on specifics).

Solution files: at VHM 802, Exercises and Datasets page.
